一、安装环境

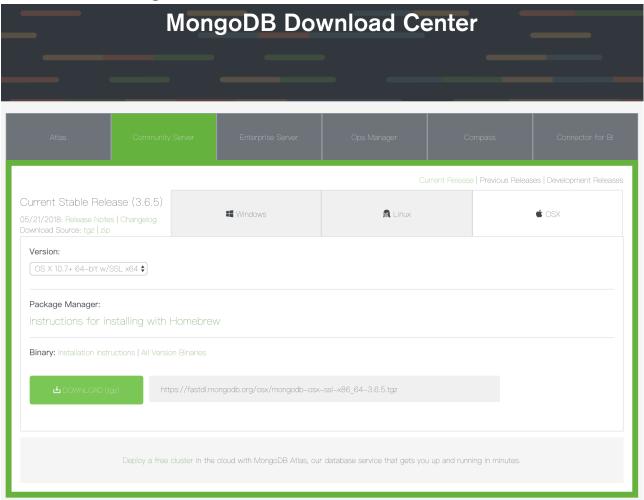

操作系统: macOS High Sierra 10.13.4

开发环境及软件包: MongoDB v3.6.4, node-v10.0.0

模块: express 4.16.0 其他工具: supervisor 代码管理平台: Github

二、安装步骤

1.安装配置MongoDB

接下来使用curl命令来下载安装:

#进入文件夹

cd /usr/local

#下载

sudo curl -0 https://fastdl.mongodb.org/osx/mongodb-osx-ssl-x86_64-3.6.5.tgz

#解压

sudo tar -zxvf mongodb-osx-x86_64-3.6.5.tgz

#重命名为mongodb目录

sudo mv mongodb-osx-x86_64-3.6.5 mongodb

安装完成后,把MongoDB的路径添加到PATH路径中:

export PATH=/usr/local/mongodb/bin:\$PATH

2.运行MongoDB

首先创建一个数据库存储目录/data/db:

sudo mkdir -p /data/db

启动MongoDB:

[YUKEdeMBP:bin yuke\$ mongod

再打开一个终端:

[YUKEdeMBP:~ yuke\$ mongo

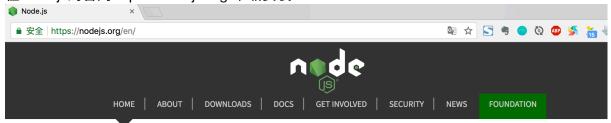

此时打开网页,输入网址localhost:27017,如果出现以下页面,则说明安装成功。

It looks like you are trying to access MongoDB over HTTP on the native driver port.

3. node.js的安装

在node.js的官网https://nodejs.org/下载安装

Node.js® is a JavaScript runtime built on Chrome's V8 JavaScript engine. Node.js uses an event-driven, non-blocking I/O model that makes it lightweight and efficient. Node.js' package ecosystem, npm, is the largest ecosystem of open source libraries in the world.

Or have a look at the Long Term Support (LTS) schedule.

Sign up for Node.js Everywhere, the official Node.js Weekly Newsletter.

安装后,打开终端窗口,输入node —version,测试是否安装成功,若安装成功则会输出版本信息。
[YUKEdeMBP:~ yuke\$ node —version
v8.11.1

输入npm —version,若安装成功则会输出版本信息。

[YUKEdeMBP:~ yuke\$ npm --version 5.6.0

在桌面新建一个js文件,取名test.js,在js文件中输入这些内容:

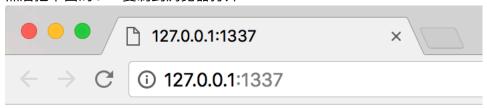

```
const http = require('http');
const hostname = '127.0.0.1';
const port = 1337;

http.createServer((req, res) => {
  res.writeHead(200, { 'Content-Type': 'text/plain' });
  res.end('Hello World\n');
}).listen(port, hostname, () => {
  console.log(`Server running at <a href="http://${hostname}:${port}/);
});</pre>
```

保存成功之后, 打开终端

输入node test.js得到

[YUKEdeMBP:Desktop yuke\$ node test.js Server running at http://127.0.0.1:1337/ 然后把下面的URL复制到浏览器打开

Hello World

说明node.js配置成功了

打开终端,输入npm install express

(如果出现权限不足的情况,可以使用sudo npm install express进行安装)

安装完成后,在终端中输入express - version

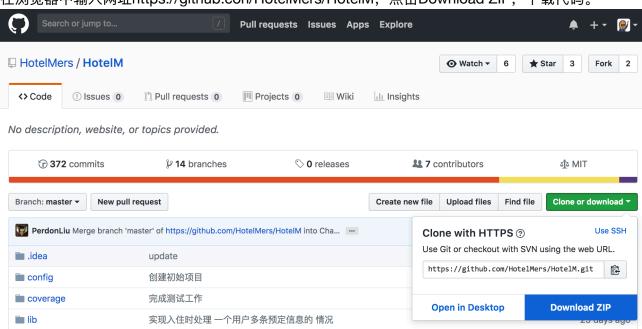

[YUKEdeMBP:~ yuke\$ express --version

4.16.0

说明express安装成功了

三、运行项目

在浏览器中输入网址https://github.con/HotelMers/HotelM,点击Download ZIP,下载代码。

解压后,打开终端,先运行MongoDB,随后再打开一个新的终端,进入解压后文件夹下的目录,输入npm install supervisor

YUKEdeMBP:HotelM-lyk yuke\$ npm install supervisor

npm WARN hotelManageSystem@1.0.0 No repository field.

+ supervisor@0.12.0 added 127 packages from 129 contributors and audited 206 packages in 2.99s

supervisor安装完成后,继续输入supervisor index,运行项目 [YUKEdeMBP:HotelM-lyk yuke\$ supervisor index

Running node-supervisor with program 'index' --watch '.' --extensions 'node,js' --exec 'node'

Starting child process with 'node index' Watching directory '/Users/yuke/Desktop/HotelM-lyk' for changes. Press rs for restarting the process. hotelManageSystem listening on port 3000

打开浏览器,输入localhost:3000/signin,进入程序。
